Subject: RE: Quick question -- Inert Finder/PFAS (deadline: 11 am EST, 12/8)

Importance: High

How about:

Question: I'm working on a quick story about PFAS appearing in an insecticide, Anvil 10+10, and I noticed on EPA's Inert Finder application that perfluoroalkyl substances (seemingly two of them?) appear as approved ingredients for non-food use only. Just wanted to confirm that was the case and if there is any concern about those chemicals, and/or if EPA has any concern about PFAS appearing in pesticides generally?

Ex. 5 Deliberative Process (DP)

However, to avoid these types of "findings" we would seek to remove such substances from the list once we verify that they are not being used in currently registered products."

We still need a sentence to acknowledge the question about these results.

Hi Catherine,

Thank you so much for the quick response. When perfluoroalkyl is searched, here is a screenshot of the results.

I think yes but we asked for specific information on which two chemicals were identified so we can follow up and remove from the system as appropriate. I never heard back.

Hi Catherine,

We are trying to confirm that the PFAs inerts listed in the inert finder are there by mistake and should be removed. I've been trying to reach Kerry, but I understand he is on leave today.

Called your work cell but, like me, you haven't set up your voice mailbox!

Can you confirm? If so, ASAP?

Can you verify asap that these chemicals are in there by mistake/need to be removed?
And then let's remove them ASAP?

This question comes up periodically. I know OPP has tried to correct InertFinder. It might be helpful for the Comms Team to reach out to Catherine Aubee, the Associate Director of the Registration Division. She has spent quite a bit of time trying address the issue.
